SUMMARY

Lead and Senior Front-End Engineer with 15 years of experience bridging design, code, and business strategy. Grounded in strong web fundamentals, I build polished, user-centric products with React/Vue, TypeScript, and modern frontend architecture. I take full ownership from discovery to production, partnering closely with Product and Design to turn complex requirements into maintainable, performant interfaces. I use AI extensively where it improves delivery, while relying on critical judgment to keep decisions grounded in product, technical, and user context. *Full interactive profile at <https://paulbu.com/cv>*

SKILLS & EXPERTISE

Core Languages: JavaScript, TypeScript, HTML5, CSS3/SCSS

Frameworks & Libraries: React, Next.js, Vue.js, Astro, Nuxt.js, Tailwind CSS, BEM

State Management: Redux, Redux Saga, Vuex

Quality: Playwright, Vitest, Jest, React Testing Library, Performance Optimization, Linting

UI & Design: Design Systems, Figma, UX Design & Prototyping, WCAG 2.2, CSS Animation, SVG

APIs & Integration: REST API Design & Architecture, GraphQL, FHIR API

Architecture/Infra: System Design, SPA/SSR/SSG, Micro-Frontend Architecture, CI/CD, Docker

AI & Tooling: Agentic Engineering, AI Pair Programming (Claude Code, Codex, Antigravity)

Team & Process: Cross-functional Collaboration, Code Review, Documentation, Agile, Mentorship

PROFESSIONAL EXPERIENCE

AI Product Developer | Independent | 10.2025 – Present

Relocated to Berlin for family reasons, completed Spätaussiedler paperwork, and used the transition period to build independent AI products and workflows

- o Owned a full product cycle for paulbu.com, from rethinking professional identity in a shifting market through visual, content, and stack overhaul, Nuxt to Next to Astro with React 19, to production
- o Built an agentic job application system that automates vacancy analysis, research, resume tailoring, and interview prep, with human-in-the-loop review as a quality gate
- o Created a multi-agent AI knowledge system in Obsidian with shared agent contracts, local embeddings, parallel ingestion, and semantic enrichment across 3000+ interconnected bilingual notes
- o Built AI-powered tools as interactive Claude React artifacts, including a multimodal expense tracker with financial and nutrition advisor agents

Lead Front-End Engineer | EPAM Systems | 12.2021 – 09.2025

Global software engineering company, project for large health insurer

- o Led a 4-person engineering squad within a 12-person cross-functional team delivering the client's public-facing web platform serving 400K+ monthly visitors
- o Executed a strategic architectural rewrite of the legacy AEM-based front-end, modernizing to TypeScript components with modular SCSS architecture, reducing the codebase by 40%
- o Optimized performance of content-heavy pages, making them load over twice as fast with Largest Contentful Paint reduced from 3.2s to 1.5s
- o Delivered a WCAG 2.2 AA accessibility overhaul hands-on: drove cross-team design discussions, resolved 100+ accessibility issues, and reworked 30+ UI components to full compliance
- o Refined the design system in close cooperation with the design team, reworking component APIs, visual consistency, and content management interfaces, directly improving brand perception and UX interview scores
- o Established rigorous code review protocols, automated linting pipelines, reducing technical debt and improving release confidence

- o Documented solution architectures, engineering conventions, and onboarding materials to align delivery across frontend, backend, QA, and BA
- o Stepped into business analysis and QA when needed to clear roadblocks, pressure-test requirements, and keep delivery moving
- o Leveraged AI pair programming (Claude Code) to accelerate delivery and tackle cross-functional challenges in Java backend and Elasticsearch.
- o Mentored engineers and strengthened collaboration by sharing front-end, design system, and accessibility best practices across multiple product teams

Front-End Tech Lead | Holmusk | 07.2018 – 05.2021

Health technology and data science company – Electronic Health Record platform

- o Led a front-end team of 4 engineers within a 12-person squad, driving delivery across 5 time zones
- o Engineered a complex SPA-based EHR application with Vue.js, Vuex, Vue Router, and TypeScript, integrating a RESTful FHIR API to handle highly structured healthcare data workflows
- o Transformed mid-fidelity wireframes into polished, production-ready UI with minimal design support, owning the full visual quality of the application
- o Evaluated design complexity, mapped technical feasibility, and proactively surfaced architectural and UX risks before execution
- o Enforced quality standards through code review, Jest/Vue Test Utils coverage, and automated quality gates

Lead UI/Front-End Developer (Tech Lead) | Codenetix | 11.2016 – 07.2018

Software agency specializing in complex custom solutions

- o Led a 4-person front-end team within a digital transformation agency, establishing foundational architecture, tooling, and coding standards from scratch as an early-stage hire
- o Architected and delivered multiple client applications end-to-end: React SPA with Redux and Saga, SSG with Gatsby, SSR with Next.js
- o Partnered with stakeholders on requirements, user stories, and technical roadmaps before implementation
- o Created interactive multimedia content and complex animations using HTML5 Canvas, SVG, and modern CSS
- o Delivered polished UI/UX design and fully functional websites with minimal design support
- o Overhauled the UX of complex dashboards, from redesign to implementation

Front-End Developer | BandLab | 09.2014 – 10.2016

Social music creation platform – Browser-based digital audio workstation

- o Engineered a browser-based SPA multitrack digital audio workstation using AngularJS and the Web Audio API, handling streaming data, complex asynchronous operations, and real-time state across concurrent audio tracks
- o Solved non-trivial DSP challenges: multitrack mixing, real-time audio effects, latency compensation, and pitch detection via Fourier analysis and autocorrelation
- o Leveraged Web Workers, IndexedDB, WebRTC, Canvas, and SVG to deliver seamless real-time audio processing at scale

Front-End Developer | DXC Luxoft | 07.2012 – 09.2014

Global digital strategy and software engineering company – Various projects

- o Built complex client-side data validation and calculation engines with optimized performance for high-traffic enterprise user bases
- o Developed resilient, adaptive interfaces for major banking and retail brands

Teaching Assistant | Omsk State Technical University | 09.2009 – 09.2014

- o Created and instructed courses on Decision Support Systems and Artificial Intelligence, covering neural networks, fuzzy logic, genetic algorithms, and control theory
- o This academic grounding provides a fundamental understanding of the AI landscape, informing how I evaluate and apply AI tools in modern development: separating substance from hype

Earlier Career

Web Developer at Mir IT (06.2011 – 07.2012) – Full-stack development with LAMP stack, C#, MS SQL

Freelance Software Developer, 3D Modeller & Photographer (2008–2011)

EDUCATION

Ph.D. Studies, Computer Science (incomplete) | Omsk State Technical University, 2013 – 2015

Master's Degree in Computer Science (GPA 4.9/5.0) | Omsk State Technical University, 2009 – 2011

Bachelor's Degree in Computer Science (GPA 4.6/5.0) | Omsk State Technical University, 2005 – 2009

LANGUAGES

- o English (C1)
- o Russian (Native)
- o German (A2)
